

Waste Management

At Glasgow Prestwick Airport we are committed to reducing the volume of waste generated at the airport as well as increasing the amount of material we can recycle.

A variety of different waste streams are produced across the GPA site that are responsibly disposed of in each appropriate waste container. It is the responsibility of all tenants to comply with GPA Waste Management Policy.

All tenants should provide their own internal waste facilities for waste segregation there are however 2 options for final waste disposal.

Option 1: Use GPA waste facility and charges will be passed on, facilities must be used in line with our waste management policy and any inappropriate use of facilities will be applicable to extra charges. The charge for use of these facilities is dependent on the size of your accommodation, anticipated volume and type of waste being generated.

Option 2: Can provide their own final waste facilities as long as they are approved by GPA property managers/environmental officer, and must still comply with GPA waste management policy.

Waste must always be disposed of in clear bags, this is for security reasons and also in line with the requirements of our waste contractor. All details of waste disposal can be found within the GPA waste management policy.

We work closely with our tenants to encourage the correct and safe disposal of waste.

Our waste management system is regularly reviewed and monitored with the target of increasing our mixed recycling to 50%.

We aim to keep making improvements to our waste management system so that we can continuously improve our environmental performance.

Further information on waste management is available from our Environmental Officer who can be contacted on smcintyre@glasgowprestwick.com
